5/7/2010	NA	22-08 dam 10-01 calf 81 ANY 0231	1 new calf at Quarantine	Page 7 of 26

3/5/2010	NA	47-08	<p>47-08 was euthanized. When gathered this 2- year pregnant cow tried to jump both another animal and impaled herself on an exposed [bolt limb]. This broke 2 ribs and made a small perforation into her peritoneal cavity. She remained with a group of about 15 animals as we tried to assess her. The smell of blood and change of behavior excited the group to the point where they started to gore 47-08. As we tried to cut out 47-08 for possible treatment, she started to externalize SI thru the hole, which had enlarged during the fighting. After 47-08 was separated, she became recalcitrant to move. We decided to immobilize her for DX-TX. While the dart was being prepared 47-08 stepped on and tore her loop of SI. She was darted w/A3080 xylazines > gave extra medetomidine.</p> <p>When lateral she was euthanized w/euthanasia solution. She was transported</p>	<p>Non responsive – blocked out information requested. Page 8 of 26</p>
