Attachment Drummond 2

Regarding the upcoming evaluation of threatened species in the CG National Forest, I would like to beseech relevant individuals in positions on public responsibility to allow the last wild bison (aka Yellowstone) to propagate in the national forests to abundant numbers. They were an essential part of the recent past ecosystem and can help restore that by multiplying their numbers (see attached sheets). I submit me earnest request in behalf of people. good ecology is good economics. We cannot guard the environment too much. I'm certain that safeguards taken for flora and fauna will never be regretted and in fact will save us.
