Comments:

I strongly recommend total preservation of wildlife,nature and land and not to give one inch to commercial interests.Let us preserve nature for future generations.Today,hundreds of plants,insects,sea and land life are becoming extinct because of mankind's stupidity and greed.The oceans are dying,corals are dying and bees are disappearing as are the butterflies. The Earth's temperature is rising from mankind's burning of fossil fuels. Clear cutting of forests and coconut oil plantations are decimating living systems around the world. For whom does the bell toll?

You're included.
