Comments:

I largely support Alt. D for maximizing wilderness, and would like to see the greatest possible protection of riparian areas - both wilderness and riparian protections to the exclusion if necessary of mineral development, timber harvest, and grazing. I would support permitted use of sheep and goats on Forest lands only if there is no risk to wildlife (either due to wildlife not being present in a part of the forest, or if a certified vaccination protocol could ensure no disease transmission from domestic livestock to wildlife). I support greater tolerance for bison on the landscape. I support no aircraft landing in the Forest except for emergency response, or as allowed in a strictly designated area in conjunction with another permitted activity, for example as part of a permitted logging or mining operation where detailed aircraft operations are spelled out as part of the permitted use.

Good luck navigating your legal mandates and wide-ranging public opinions on forest use and conservation!
