Comments:

life on this planet is dying off at an alarming rate! 60% of wild life gone in the last 50 years and another 50% is going to be gone in the next 30 years! the warming of the ocean is killing off the coral witch is home to hundreds of kinds of life! fires and floods and the loss of glaciers and the rising of the ocean waters! we must treat this as the very real emergency it is! we must change the way we do things! 1 in 2 guys and 1 in 3 women are getting cancer in their lives! 10.000 of us are dying from cancer a week in the USA ALONE! 50% of illness is water born yet we are still dumping toxic waste into our less than 1% fresh drinkable water on this planet! DOES ANY OF THIS SOUND LIKE A PROBLEM THAT MUST BE FIXED?
