In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Nina Rollow
Portland, OR 97202

Dear Custer Gallatin Forest Supervisor Erickson,

Wilderness should remain WILD. Save Custer-Gallatin

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

There is a good reason that our national parks, monuments, forests, etc. have been protected from development, including logging and drilling. They are unique and restorative to our personal and national psyche. If jobs are an issue, use the need for maintenance and protection of these areas to provide jobs.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Patricia Ohlmann

Dear Custer Gallatin Forest Supervisor Erickson,

I am just one voice in a Nation where wilderness & iconic places are being destroyed for fossil fuels & the greed of a few. The loss includes home to many plants, animals, reptiles, birds & other living things that depend upon us to protect them. I humbly ask you to keep the strictest protections possible. It will allow you to sleep at night knowing that you did the right thing. Blessings to all of God's creations.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

Dear Mary,

I don't want to minimize the complexity of tensions your facing, and appreciate your willingness to be in leadership. My hunch is you don't want to live in a world without healthy forests...and the wilder the forest, the healthier it is. Something immeasurably valuable is lost when that wildness is eroded. Not just the carbon value, or timber value, but also all the things we don't have metrics for - the infinite, intricate, interdependent relationships within and between species and the inherent dignity of each one of them; the dignity and beauty of the mountain and stream.

I don't want to get lost in arguments embedded in metrics that allow us to trade and bargain and slice up the forest solely in terms of human benefit.

I ask you to dare to go deeper than that. I invite you to take a moment and drop into your heart and trust your love for this priceless land and all its beings...on its own terms.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Mary Sajdak
BELVIDERE, IL 61008

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

I have hiked and fished in this area, and I know that it is more valuable in an undisturbed state. The dollars that are generated by outdoor recreation help support the surrounding communities and will do so far into the future - not so with extractive activities

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

As someone who has backpacked extensively in the wilderness of Yellowstone National Park, the Teton Wilderness, and the Washakie Wilderness, I know first hand how important these areas are to the integrity and well-being of the national park and its wildlife. I'm now 76 years old and don't do much backpacking any longer, but I would like for my grandchildren to have the same opportunities to thrill at the experience such pristine wild lands offer. For this reason I urge you to recommend for formal wilderness designation all the lands in the CGNF that qualify.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Lawrence Morse

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Endangered species such as grizzly bears and gray wolves migrate from Yellowstone National Park into the roadless areas of Custer-Gallatin National Forest. Please review your plan and protect this wildlife!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Dear Custer Gallatin Forest Supervisor Erickson,

The preservation of our national wilderness areas is vital for the health of our people, environment, and wildlife. Human actions are the cause of the current major extinction of species that live with us on our planet. Wilderness areas are the few remaining areas where the diversity of species on our planet can be supported. It is essential to do so.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

The Custer Gallatin National Forest contains some of the wildest, most scenic, and ecologically-important lands in the lower 48. Iconic species like grizzly bears, wolves, bison, elk, and more migrate north from Yellowstone National Park to the Custer Gallatin's vast roadless areas.

It is also a landscape under threat, from climate change, human impacts, and hostile national policies that threaten all our public lands.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Dear Custer Gallatin Forest Supervisor Erickson,

Animals do not know Park boundaries. Be sure and create a buffer to protect these animals/grizzly bears & wolves. They are part of the necessary diversity required for health parks.

FYI, the lack of a buffer outside Denali National Park has resulted in wolves killed by zealous hunters & trappers. Now there are few wolves in Denali National Park now. The last wolf killed was a pregnant alpha female.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

“Guard, protect, and cherish your land, for there is no afterlife for a place that started out as heaven.”

C. M. Russell There is no place more worthy of this quote than the Custer Gallatin NF. A hiker coming out of E. Rosebud once said to us, “You are about to see the sight of your life!” We have been awed by multiple wildlife sightings, gorgeous wild flowers, stunning peaks, lakes and rivers. Wilderness supports humans physically, spiritually, psychologically and economically. We have watched the changes in this region due to population growth. Protection is desperately needed.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club’s vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. Dear Custer Gallatin Forest Supervisor Erickson,

To Keep the Balance in NatureYou Must Protect the Apex Predators ?? Make your CGFP Revision Right and Be Proud of it !

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Thekla Sanford
Buellton, CA 93427

Dear Custer Gallatin Forest Supervisor Erickson,

It is ever more important as to be goes on to protect wild areas with very strong laws and enforcement, including the wild species that rely on them. For too long lawmakers and land managers have pandered to corporate and livestock interests, to the great detriment of the natural world that we all love and depend on.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Andy Selig

Dear Custer Gallatin Forest Supervisor Erickson,

WE MUST SAVE WILD LIFE NOT EXTINGUISH IT.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

Dear Custer Gallatin Forest Supervisor Erickson,

I would like to comment on the revision to the Custer-Gallatin Forest Plan. Thank you for the opportunity to do so.

A taxpayer and voter, hiker, snowshoer, cross-country skier and backpacker, I support wild forests proactively managed for their ecological and wildlife values. I also support forests free of mechanized noise. Thus, I urge you to keep the Custer-Gallatin "wild". This means no new roads, no extractive activities like mining or timber harvest (beyond necessary for fire suppression, no hunting, and no off-road vehicles including snowmobiles.

Thank you for the opportunity to comment.

Dear Custer Gallatin Forest Supervisor Erickson,

Places like the Custer-Gallatin National Forest need to be kept wild. Failing to protect the forest and the wildlife only benefits the rich and ruthless. There is no plan B. If we fail to protect our planet we will also be on the endangered species list. The clock is ticking. Fight for more protection. Your life and your descendants' lives are on the line too.

Dear Custer Gallatin Forest Supervisor Erickson,

I live near the Adirondack Park which is a mix of public and private land. There is incredible pressure on state and local officials to open up more of the park to motorized vehicles. I have been in the path of motorized vehicles like snowmobiles and ATVs while hiking/skiing. Being in the path of a motorized vehicle can be a terrifying experience -- I am sure wildlife feel the same way. I support the idea of having of roadless areas precisely because of my own experience. Some areas simply need to be roadless.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Lisa Swinton
Islip, NY 11751

Forest Supervisor, Mary Erickson

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Our planet is dying because of human's and all their abuse and pollution. Life of everything depends upon humans ending their abuse of the natural world and instead start caring, protecting and nurture our natural world before we loss it.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Donna Johnson

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

You are hired by the people and we expect you to do your job of keeping wildlife safe when managing lands. DO the right thing to protect wildlife AND the forest. Do not forsake any.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Wild places are essential to keeping our earth livable. Make a better plan to keep wild places free and wild.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Martha Goldin
San Francisco, CA 94118

Dear Custer Gallatin Forest Supervisor Erickson,

We need a plan that will prohibit the killing of wildlife in the Custer Gallatin Forest Plan Revision. Too many times we hear of wildlife straying outside the boundaries of our National Parks and "hunters" murdering them. Wildlife should have the freedom to roam, procreate, and live without constant fear of being killed.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Jon Klingel

Dear Custer Gallatin Forest Supervisor Erickson,

WE MUST DO BETTER

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

If we want to exist with wildlife, which I think is important to the living earth and to our own human psyche and well-being.

Wild life are at the mercy of the human invasion into their normal habitat.

We must be cognizant of our impact and limit our disruption of their territory, and especially of their migratory routes. Animals can't read signs, so they need to be free to roam.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

Wake up to your over riding responsibilities to the land wildlife and people of the USA. Ditch the acquiescence to money greed and politics.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Erline Towner
Milford, NH 3055

Dear Custer Gallatin Forest Supervisor Erickson,

We need MORE wild lands, not fewer, and they must be protected to the greatest extent possible. We have taken over and exploited in every way we know the habitats of far too many species, pushing an astonishing number of them to extinction. The Custer-Gallatin proposed revisions can either make or break the viability of the entire area and a wide range of species, including some of the most iconic--wolves, bears and others--in the history of the country (though, of course, all the natural inhabitants deserve, and must have, full protection to survive. I urge you to choose the wisest plan for the long-term survival on them and the land itself.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

We are at a time where wild areas are becoming open to big business such as oil. Our wildlife are also impacted. We need to protect and preserve all species especially those that are threatened to extinction. The grizzlies, black and brown bears, wolves, and other threatened species should be able to live in wild areas and I hope the Custer Gallatin Forest will remain wild.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

I support the wilderness recommendations in Alternative D of the Revised Draft Forest Plan; however, they must be improved by adding the entire 230,000 wild, roadless acres of the Gallatin Range as Recommend Wilderness in the final forest plan. The following three points also expand on the importance for the wild Gallatin Range.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Dear Custer Gallatin Forest Supervisor Erickson,

I am concerned that your plan does not adequately protect the wildlife, which is integral to the health of forests.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Marjory Keenan

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

If we do not fully protect the lives and ecosystems of apex predators and the animals under them, we are risking our own lives in the long run. We could lose everything due to one little imbalance as we have seen before. Please do all that you can to protect every living being on that land, on all lands. We are all just guests that have decided to stay permanently in their home.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. Dear Custer Gallatin Forest Supervisor Erickson,

Please let us make no mistake: a better wildlife and forest management plan is needed. Foresight and FAR-sight with clear goals should be called upon now. We need to protect the great diversity of our WILDS -- creatures and plant species, great and small -- in this, the continental United States. I/We truly appreciate your consideration of our future. Montana aka Big Sky country is huge and mostly silent. It deserves and needs our protection.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

I lived for many years in Gallatin Gateway with my house up against the Gallatin National Forest on Rainbow Ranch Road. It was a beautiful place, mainly untouched, and I hope it can stay that way. I never saw anyone monitor the trails there for how much kill hunters were taking or for misuse of the land.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Jane Grove
Ogden, UT 84401

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Bottom Line, Let's Keep The Custer-Gallatin Pristine & Wild!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Jackie Candela
Godfrey, IL 62035

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

These wild animals need to survive, and we need to do all we can to help them.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

This is really important, - to preserve pristine areas of the USA for the benefit of future generations. Please consider the need to conserve wild areas for all Americans.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Diane Mitchell
Woodland, CA 95695

I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Vina Gardner
Oregon City, OR 97045

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Dear Custer Gallatin Forest Supervisor Erickson,

NATURE HAS A WAY OF CREATING THE RIGHT BALANCE. SO, I BELIEVE IT IS 'BEST' TO KEEP LAND AS 'WILDERNESS'! WE HAVE ALREADY PERMANENTLY 'LOST' SO MUCH 'NATURAL' RESOURCES.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Maintaining roadless areas is an important aspect of protecting and preserving our endangered natural ecosystems. As an access point for more human traffic roads spread invasive and foreign species and create dead zones where wildlife, ranging from insects and bugs to large game, elk, deer, wolves and bears have increased proportional mortality rates. Further roadless wilderness areas greatly slow the movement of water through the watersheds purifying and protecting our most important and increasing less abundant resource. I encourage the forest plan to take into account the protection of our endangered natural heritage and to not fold in the push for financial exploitation. What good is money when there is no nature to enjoy.

Dear Custer Gallatin Forest Supervisor Erickson,

It seems that recent information suggests that a variety of species is important for the good health of our ecosystem and that often we don't know the importance of certain animals before we lose them. I hope you can protect these animals.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Marcia Bailey

Dear Custer Gallatin Forest Supervisor Erickson,

If the Earth's surface is wild and natural, this is planet Earth, the Earth, that, alone, generates and flows all life lines for life itself, including all of man's. Wild, natural Earth is broken down into sections, scientifically ecosystems, like Southern California's "Oakwood-land and Chaparral". The big green is the evolutionary event that provided life as we know it, and here's a mere handful of ecological, life-supporting services like, oxygen releasing; the balancing of the gaseous composition of the atmosphere, the vital water cycle, vital for the cooling of the climate and the vital nitrogen cycle that passes between plants and animals and provides 80 percent of the air man breathes.

Trees and plants, specially trees, shade Earth from the heat of the sun; trees and plants, especially trees, are the greatest storage and warehouses of the climate warming gases, and when we slice them down, the stored gases escape back into the atmosphere to heat up the climate.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

The long-term conservation of many large mammals in the Yellowstone ecosystem, of which the Custer- Gallatin National Forest comprises an important portion, is dependent providing adequate protection for roadless areas in the Yellowstone ecosystem. Hence I believe that existing roadless areas in the Custer-Gallatin National Forest should be designated as wilderness and this should be reflected in the updated management plan for the forest.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

It is important to look at the effects of having the predators reintroduced into our wildlife, there was a lot of positive impact in Yellowstone park after returning wolves to their habitat. Now that we are in an environmental crisis we should take all of this into consideration and try to do what is best for the planet, which ultimately benefits us as well.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

This is no time to contaminate wild places like the Custer-Gallatin. You need to create a better plan that will keep Custer-Gallatin wild, truly wild.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

david j. lafond

Dear Custer Gallatin Forest Supervisor Erickson,

We must protect our irreplaceable remaining wild lands and wildlife. If they are gone, it will be forever.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Custer-Gallatin National Forest should really have been included in Yellowstone -- it is important to the survival of grizzlies, wolves, bison, elk, and other species, all of which migrate from Yellowstone National Park to Custer-Gallatin's roadless areas. This needs to be considered in any management plan for Custer-Gallatin, but so far it hasn't been. Any plan for this region that doesn't protect its wildlands and roadless areas is inadequate.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

Keep Custer-Gallatin wild - our kids and our grandkids need a better plan. We OWE them a better plan!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Linda Kohn

I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

F. Carlene Reuscher
Costa Mesa, CA 92626

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

PLEASE protect our park lands and animals!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Marie torget

Dear Custer Gallatin Forest Supervisor Erickson,

I care about the welfare of wildlife and the Earth. Please keep the Custer-Gallatin wild. It is the right thing to do.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

As a longtime docent at the John Muir National Historic Site, I have the occasion to meet visitors from around the world who are inspired by Muir and view him as a great national hero who advocated for the preservation of America's wild places. The need for the preservation of our wild places has only increased since then Muir's time. I support the Sierra Club vision for the Custer Gallatin.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Please take care of these beautiful wild lands and the animals. These places need to be protected, not exploited.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

lisa fisk

Dear Custer Gallatin Forest Supervisor Erickson,

I believe that all our living wildlife were created for reasons of maintaining balances in nature. Humans seem intent on destroying these balances where we must better educate the realities of climate change, plastics, pollutions of all sorts. Our wildlife were created to maintain the balances and the best plans must be brought forward to allow the continued existence of our precious wildlife. We need much tougher legislations for protection.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

Climate change, growing population, and increasingly intensive use of parks and other recreation areas means this is a key time to preserve what wilderness we still have. Once lost, these areas will never return to what they are now. I don't want to live in a country, a world, where industrialization and exploitation of resources has eliminated wilderness areas for all but the wealthiest. While the draft plan has positive aspects, please consider the Sierra Club's recommendations. The world that gave birth to humans is rapidly disappearing and we are killing it.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Victoria Holman

Dear Custer Gallatin Forest Supervisor Erickson,

We need to protect our wildlife in safe, natural environments for future generations to enjoy as we have.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Kimberly Hughes

Dear Custer Gallatin Forest Supervisor Erickson,

Endangered species such as grizzly bears and gray wolves migrate from Yellowstone National Park into the roadless areas of Custer-Gallatin National Forest. You are deciding how to manage this forest for the coming decades; however, your draft plan fails to adequately protect wildlife habitat. I strongly urge you to formulate a better plan for our national forests and endangered wildlife. Thank you.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

We cannot afford, historically or humanely, destroy lands where wildlife lives and thrives. We owe protection for these animals who historically lived here before any humans settled and continued to destroy, mutilate this pristine and bountiful country. Humans are greedy and selfish. We would do well to change our attitudes and respect our country and its wildlife.

I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Sandra Gleason
Cleveland, OH 44118

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

The iconic top order predators migrate from Yellowstone NP to surrounding areas and it is incumbent upon USFS to protect this natural heritage on behalf of my children and their children.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

My family and I have visited this region several times, and I have hiked and backpacked in some parts. I hope to be able to enter and visit, leaving "no trace", wilderness areas, proposed and designated, that are mentioned. It is critical for the Forest Service to manage these national resources for the long term stability and health of the ecosystems. Roads, motorized vehicles and resource extraction activities have no place in the CGNF, which is a critical component of wildlife corridors between Canada and Northern Idaho and Montana, into Yellowstone-Grand Teton and beyond. Pressure is especially great to reduce top predators like wolves and grizzlies, animals that are vital to the health of these ecosystems and require large areas for their safety. Wilderness protection in the areas described will provide an enormous boost to the survival potential of these and other species, such as the bison, and the health of the entire CGNF and beyond.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Kathy Kaiser

Dear Custer Gallatin Forest Supervisor Erickson,

The original intent of forming National Forests & Parks was to keep them pristine, undefiled & in their original state. That means not developing them or poisoning them. Please reform your management plan accordingly.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Rita Gehrke
Deerfield, WI 53531

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Preserving life for both human and animals should be a priority
if we're to coexist with one another on this tiny little planet of ours.
Just look at the universe and be grateful that we're able to live on our planet Earth.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Mario E Martinez

Dear Custer Gallatin Forest Supervisor Erickson,

Our family does not support deforestation and only buys products with "forested sustainably" symbols on paper towels, toilet paper, etc. Wildlife gives us our life. It supports all the vegetation we need for our air and water so we need to leave them alone or we know we suffer too. I hate seeing satellite pics showing humans are everywhere wiping God's gift to us out. Everything supports everything else! The Indians are the only peoples knowing how to manage our earth. Add Wildlife Corridors for animal migration so they don't inbreed and die off more than they are now from our "isolated islands of parks".

You want to start something, let's start Zero Population Growth.

Thank You

I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Carol Pierce

Dear Custer Gallatin Forest Supervisor Erickson,

Please make sure that you choose the best plan that will protect national forests, wildlife and wildlife habitat in your upcoming Custer Gallatin Forest Plan Revision #50185. We will all be watching you.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Dear Custer Gallatin Forest Supervisor Erickson,

I am hoping and expecting the US Forest Service to develop the best management plan for the Custer-Gallatin National Forest. The best plan will keep this area wild for the benefit of the wildlife that lives there and has migrated there from Yellowstone National Park. We need to maintain safe areas for endangered wildlife such as grizzlies and gray wolves to thrive and reproduce to continue their species.

Thank you for your service to people, national parks and forests and to wildlife, especially the endangered.

Sincerely,
Chaya Staub-Krell

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Nancy Hiestand
Davis, CA 95616

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Keep the wilderness wild. It's an investment in our future.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

D Spaulding

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

The Custer Gallatin National Forest contains some of the wildest, most scenic, and ecologically-important lands in the lower 48. Iconic species like grizzly bears, wolves, bison, elk, and more migrate north from Yellowstone National Park to the Custer Gallatin's vast roadless areas.

It is also a landscape under threat, from climate change, human impacts, and hostile national policies that threaten all our public lands. But there's something you can do to help!

Right now, the Forest Service is developing a new management plan for the Custer Gallatin. The new plan, once finalized, will guide management of the forest for decades to come. So far the plan falls short on key protections for important wildlands and roadless areas -- Please revise this plan and implement with more protection for the wildlife and habitat. Thank you

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Bonnie Jaskolka

Dear Custer Gallatin Forest Supervisor Erickson,

Please have the Custer Gallatin Forest Plan Revision designed to emphasize wilderness preservation. Once an area is developed it would take eons to restore it to wilderness.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Eleanor Porciello

Dear Custer Gallatin Forest Supervisor Erickson,

We must protect all animals.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Jeffrey Starr

Dear Custer Gallatin Forest Supervisor Erickson,

I am writing to ask you to keep the Custer-Gallatin National Forest in its present state to be the home of God's animals in a safe and healthy environment. Whether it's grey wolves or grizzly bears ... down to smallest species, these animals depend on our mercy and compassion in order to survive and thrive. Please, listen to the people who really care and support efforts to keep our national forests pristine, safe, and healthy places for animals to thrive. Thank you for listening.

Dear Custer Gallatin Forest Supervisor Erickson,

Dear U.S. Forest Service Supervisor,

Thank you for your dedicated service to our Country and your hard work to promote our national forests. I appreciate you and all public servants who are trying their best to do a good job for all of us. Your goals are linked closely to the goals of the Sierra Club; although you have other competing demands. I know there are many voices telling you how to do your job. It isn't easy. Thanks again. I urge you to give consideration to the recommendation of the Sierra Club as outlined in this petition. I thank you, but more importantly, our children and grandchildren will thank you. Sincerely,
Everett

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Tina Fishell
Holland, MI 49424

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Please make the plans that will benefit wildlife and the environment most. People need wildlife and the environment to be protected whether they realize it or not. We are in a climate crisis (my own area is seeing record highs right now) because we've bulldozed too many trees and too many woods. We are seeing wildlife extinction rates like we've never known, and it would be great if you would place wildlife and the land ahead of people and their desire to pave everything in sight.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Please do what you must to keep existing wild places wild! We are losing so many of these wonderful places. I cannot imagine a world in which humans have 100% percent control over the environment. There are places that would've been much nicer had we LEFT THEM ALONE! Now we need to ensure what we have left can at least stay that way. The Amazon or "lungs of the planet" is another of those special places.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Forest Supervisor, Mary Erickson
Custer Gallatin National Forest
10 E Babcock Ave
Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

The new plan falls short on key protections for important wild lands and roadless areas. The Custer Gallatin National Forest is unique in that it contains some of the wildest, most scenic and ecologically-important lands in the lower 48 states -- once wildness is destroyed, it takes lifetimes to get that back, and the iconic animals will be gone forever. Elk, bison, wolves, grizzlies, migrate north from Yellowstone to reach the roadless (less human places) lands, which they need to survive. We need to make sure we keep it WILD, all important.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Allison Isaacson
Fortuna, CA 95540

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Dear Custer Gallatin Forest Supervisor Erickson,

The plan for management of this vast forest area is important but must also take into account preservation of the natural habitat for wildlife.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

I believe that the management of this forest should FAVOR wilderness preservation. Increasing population and climate change will impact these wilderness areas, and if we do not act now, before these forces take their toll, we will not get a second chance to preserve them. Roadless areas and wilderness recommendations will give larger wildlife protections from loss of habitat and mechanized destruction.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Carla Cicchi
Placerville, CA 95667

Dear Custer Gallatin Forest Supervisor Erickson,

on the brink of mass extinction of our wildlife we have to save and protect every wildlife. and not only in national parks. we have to give these animals more space and protect them so our children and the children of them will have the luck to see these magnificent animals roaming in the wild. Please Mrs. Erickson help and protect them. Thank you

The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Bruce Coston

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

We have to learn from our past mistakes, we need to protect wolves and bears in our forests. The circle of life needs all its parts for it to thrive!! Protect them!!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Luigina Rice

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

We must protect wildlife and forests to promote biodiversity. The interrelationship of species and environment needs to be preserved and protected. The loss of even one species can have deleterious effects on the environment. This has been demonstrated again and again as species have been reintroduced where they had previously been eliminated.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

I support Sierra's plan. Our environment has too many challenges as is and the status quo will not be sufficient to protect us and the world going forward. We need to set aside more wilderness areas for many reasons one of which is that protection of existing ecosystems and restoration of more ecosystems can also help avoid some of the worst damage from climate change! So many extinctions are looming on the horizon if we don't take action! Please be a leader and go bold! Protect more of these beautiful areas for now and future generations!!

Thank you!

Dear Custer Gallatin Forest Supervisor Erickson,

The current plan falls short in its ability to protect wildlands and roadless areas. The Custer-Gallatin National Forest is critical for protecting iconic American wildlife such as grizzly bears, wolves, bison and elk. I urge you to protect this ecologically important land from harmful human activity. These animals are already threatened from manmade climate change. This land needs to be protected for all Americans. Please do everything in your power to protect this National Forest as the decisions made today will have far reaching consequences tomorrow.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Kathryn Robens

Dear Custer Gallatin Forest Supervisor Erickson,

You can do better.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Hello,

I would recommend wilderness in the Custer Gallatin. Wilderness is important for the ecosystem. If species start to become extinct, or even if their population lessens, this could be detrimental to the whole forest. Each species has a specific role within their ecosystem and if they are gone, nothing is able to replace them, leading to many problems within the forest. It is crucial we keep as many forests, wetlands, grasslands, etc. as wild as possible so they are able to support our Earth. I plead you to please keep the Custer Gallatin wild.

Thank you.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

FW Dustin
Walsenburg, CO 81089

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

With all of the negative impact we have put on our planet, we, quite simply, need to protect our remaining wildlife areas to our very best abilities.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Christopher Miller
Des Moines, IA 50317

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Keep the Custer-Gallatin wild! Conserve our lands and protect our wildlife.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

As someone who helped monitor and collect DNA in Glacier Nat'l park for grizzly bear research - I urge you to make a better plan for wildlife management in the Custer-Gallatin National Forest. We need a plan that will support our natural resources and encourage others to do so - especially those of us who visit the national forests throughout the country.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

The Custer-Gallatin wildlife preserve must be protected for present & future generations of animals & people.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Jack Driscoll
San Francisco, CA 94134

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Dear Custer Gallatin Forest Supervisor Erickson,

This plan for the Custer-Gallatin Wild is pretty specific. This is because Sierra Club has put a LOT of research and thought into it. Please head their concerns. They are visionary stewards of the land, water and air for all of us. I trust them and I suggest that you consider this Plan revision over the short-term commercial interests or lobbyists who would only be too happy to steal from future generations. Once we destroy the pristine forest, we can never retrieve it.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Faye Bartlett
Bellingham, WA 98226

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

I want my children and grandchildren able to visit such forests in as pristine a condition as possible.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

Here's something to ponder...toxins. Our entire planet is in the orange or red. Will we even have children in our near future, and will they be able to breath, drink water and see trees with all the misguided plans to destroy even more of our Eco system? Wake up! we do not have any more time to wait for "GREEN Plans" to develop. 10 years from now will be too late.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Holli Fields
Albuquerque, NM 87108

Dear Custer Gallatin Forest Supervisor Erickson,

In addition to proposals by the Sierra Club, my concern for the landscape is the threat from climate change, human impacts, and hostile national policies that threaten all our public lands. As humans, we can work out proposals that can protect the environment and the wildlife within.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

In the face of the alarming retreat of wildlife and natural ecosystems worldwide, and the acceleration of climate change faster than climate models have been predicting, it's time to acknowledge that wilderness -- natural ecosystems that maintain their own natural balance -- is our most valuable natural resource. We must preserve and protect as much wilderness as possible, for its own sake, but even more for our sake: humanity can have no long-term future on earth without a robust, sustainable natural world.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

Endangered species are often the “canary in the coal mine”, the first signs of habitat degradation. We don’t even know how many species were lost without our having been aware of them as we ravaged the landscape. If we’re not careful, Homo sapiens will wind up on the endangered species list. When that happens, the rest of the creatures on Earth would cheer if they could at the beginning of the end of the long nightmare of wanton destruction and slaughter that drove many of them to the brink of extinction. Unfortunately, our demise is likely to be the doom of many of them as well.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Diane Langejans
Irvine, CA 92606

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

I hope the forest service paid attention to the UN report on the worldwide loss of biodiversity. Keeping the Custer-Gallatin as wild as possible would be the best plan for the plants, animals etc. that live there and would protect the diversity of the forest.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

Dear Custer Gallatin Forest Supervisor Erickson,

Predators are a valuable element in the wild. They are the answer to maintaining the balance of animals in their habitats; it has always been and should continue undisturbed by man in our National Forests and parks. Limited numbers of people need to be restricted from overrunning the wild areas with careful planning of visits. These very special places must be preserved for our children and grandchildren. Please help protect the predator animals and there sanctuaries.

Dear Custer Gallatin Forest Supervisor Erickson,

Roadless areas are an essential component to preserving the character of a wilderness. They allow for freer and more natural migration of animals and reduce human-wildlife interactions, especially negative ones, which is key given the large fauna that live in Custer-Gallatin. The linkage of wilderness spaces for wildlife and plants will make it more likely that the area continues to support diversity and thrive, rather than isolating populations. Thank you for your consideration of my views on this.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

We have a cabin and property on the Rocky Mountain Front outside of Choteau, Mt. and spend my summers there every year for 5 to 6 months.

there isn't anything that compares to being able to see a Grizzly walk by. or an Elk and always the deer. I feel that all plans should include as much protection as possible for the animals and the environment. I want these things to be available for future generations to see and enjoy as I have been able to. Once they're gone, they're gone forever.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Sherry Pennell
Aromas, CA 95004

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Keep the Custer Gallatin Wild and come up with a different plan.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

The priority must be the preservation of roadless wilderness areas and the protection of all natural wildlife. Trees can be grown and harvested in a multitude of places. But, wildlife requires seclusion and protection if it is to thrive and remain in sustainable numbers. Please protect what is vulnerable.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Jessica Fielden MD

Dear Custer Gallatin Forest Supervisor Erickson,

Please preserve unblemished wild for our wolves and bison and other wildlife. In wilderness is the saving of these majestic and unparalleled creatures, and of the soul of humanity as well..

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). Dear Custer Gallatin Forest Supervisor Erickson,

I believe it is critical for the Forest Service to develop a sound plan that will ensure protection of some of the most scenic, diverse ecologically important - no not just important - but critical!! - lands in our lower 48 states. Grizzly bears, wolves, bison, els, and other magnificent mammals need and must be protected. This roadless area should and must remain roadless. It is our responsibility to protect such areas for the wildlife, the ecology and for future generations.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

The Custer Gallatin National Forest contains some of the wildest, most scenic, and ecologically-important lands in the lower 48. Iconic species like grizzly bears, wolves, bison, elk, and more migrate north from Yellowstone National Park to the Custer Gallatin's vast roadless areas. Please create a forest plan that protects and preserves this beautiful landscape and all it's majestic animals that deserve a place to feel safe and call their home.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Debra Curci

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Please protect this entire area. We need green places.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

America is not America without wilderness, without the iconic animals and habitats that stand for freedom and self reliance. My grandfather helped to tame the west, but he also cherished and respected all that made it possible for future generations to test their metal too in the presence of wilderness.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

True wilderness has value not just for what it does for humans but also for what it is, with or without us. Wilderness is extremely important as an invaluable source of wildlife habitat, biological diversity, high water quality and numerous other values found nowhere else. Wilderness is also important to me as a place to experience nature and the peace and quiet found there. Our wild lands, wildlife and nature are our cultural treasures and must be protected. Natural resources should not have a price tag. To quote Theodore Roosevelt, regarding wild lands "Our people should see to it that they are preserved for their children and their children's children forever, with their majestic beauty all unmarred." "We are prone to speak of the resources of this country as inexhaustible; this is not so." Please do everything you can to keep this wilderness wild.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

I firmly believe that we must make wiser and long lasting decisions on behalf of our wildlife. Maintaining wild areas for them is imperative for their survival. I ask that wildlife areas and corridors be kept, extended and kept protected by law. Wild areas have shrunk to such an extent and hunting/poaching cuts back even further the survival capabilities of many. Thank you..

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

The Custer-Gallatin National Forest is just that...a National Forest, meaning it is owned by every American taxpayer. The function of such a place is to protect and maintain the existing natural ecosystem intact. America's wild places are unique ecosystems, with unique biota, many of them found no place else in the world. Uphold the Forest Service's original mandate. Use the very best plan available for the Custer-Gallatin National Forest.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

The answer is MORE protected forests for not only wildlife but our future generations! Do not set the bar so low for yourself or others.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Madison Cooper

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Climate change is forcing the migration of many animal species who are not as adaptable as humans to temperature change. We need to provide open migration corridors before it is too late. There is an essential need for core habitat and corridors that connect core habitats for most endangered species. This would also maintain healthier populations through more diverse genetics.

Nature has perfected this world as one interconnected biosphere relying on its many parts to perform almost as one massive organism.

These lands have been preserved for posterity not just until they can turn a better profit! Once wilderness is lost it's gone forever and nature loses its balance. Interdependent ecosystems collapse and extinctions increase exponentially. The world our grandchildren will try to grow up in will have much less potential than the one we knew!

Extinction is forever!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. Dear Custer Gallatin Forest Supervisor Erickson,

As a PNW dweller for the past 40 years I am not a "Jill-come-lately" to "issues" surrounding bears. I am currently (26 years) a north Idaho resident and prior to that lived in Alaska for nearly a decade.

The human population pressures alone affecting north Idaho wildlife are quite incredible. Roads I once had almost solely to myself are now heavily traveled by trucks and commuters and tourists. The sleepy way of life I once enjoyed is no more. It'll

Life must surely be hell for the bears and other wildlife that once lived here. As people invade their homes, where will they go? Their habitats are now also negatively impacted by the effects of Climate Crisis which is here - and very, very real.

Renowned Harvard biologist EO Wilson wrote a book ("Half Earth") recommending half of our planet be set aside to preserve biodiversity. Biodiversity is CRITICAL not for its own sake, but for humanity as well. I hope we (you) are wise enough to take the lesson: PRESERVE HABITAT

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

I visited the Custer-Gallatin National Forest with my daughter last summer. It is an area of incomparable beauty, yet clearly facing human pressures from the east side (Red Lodge has a bigger community than year ago). I believe the CGNF has a very important role as a migration corridor and as part of the greater Yellowstone ecosystem. I strongly support any measures to designate sections as wilderness. And as a backpacking birder, I look forward to hearing the birds, not the vehicles. Thank you for allowing me to comment.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

Animals are part of the earthly Kingdom to be established on the Earth (Genesis 1), as man cannot keep going outside the laws of nature without feeling negative ramifications for going outside of the original covenant, as he will also receive blessings for doing the right thing.

Rivers and lakes and streams and a pure river of life is the bestowing.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Save the wilderness!! Its our heritage...

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Eva Pacifico

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Our wildlife is priceless. It is our future in more ways than one. Inspiration is one thing that nature provides. So many ideas in engineering or medicine come from nature. When these thought provokers are gone or so few, it's likely fewer good ideas will come about and this means less income for our Treasury too.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

During this period of rapid change it is imperative to preserve intact our western wilderness heritage. Ecosystems are now becoming hyper-fragile in the face of development and climate trends. Further development risks over-limiting natural wildlife ranges, adding to the threat of irreversible extinctions. This becomes both a biological and economic loss.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Tina Wener
Morro Bay, CA 93442

Dear Custer Gallatin Forest Supervisor Erickson,

stop this mad killing of innocent creatures

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. Dear Custer Gallatin Forest Supervisor Erickson,

Once a fragile ecosystem is affected by humans, it often cannot fully recover. That broad concept is enough for me to be against relaxed restrictions.

Once we relax protective restrictions, we could have a very hard time reinstating them. That tells me that relaxing protection is not an option. These lands are unique, by definition they are not usual, not found in other places. Their wildlife is unique. My experiences there have been unique to the area, the season, my frame of mind. Each time I go through the area, my impressions and experiences are at least a little different. Sometimes it's a brilliant sunny day, sometimes I can see a gully-washer on the horizon, sometimes I see no living creatures, sometimes they're showing off. In my 70ish years, I've been to a lot of places where I found flowers, trees, little critters, views that were unique to that area. I hope my grandchildren will see the same things I saw. I hope they take their own children some day.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Dear Custer Gallatin Forest Supervisor Erickson,

Living in the glorious NorthWest, we have a deep and keen appreciation for our wild places...without which people AND the plant SUFFER. Our FORESTS are at the very forefront of helping save the SOVEREIGN PEOPLE's lands and future...and you KNOW that, given your responsibility as CGNF's Supervisor, a position of genuine consequence.

It is COMPLETELY up to US to do the right thing in this moment -- like it or not, and we do NOT -- of environmental crisis. The revisions proposed in "Custer Gallatin Forest Plan Revisions #50185" are, simply, a mistake.

Our entire family out here urge you in the strongest possible terms -- make a BETTER plan, not a degradation of the current one.

Thank you in advance.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Laura Raynes
Boise, ID 83716

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Mary,

This land must remain natural to protect critical habitat and wildlife. Please do the right thing. Keep Custer-Gallatin wild.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

I have grown up around the Custer-Gallatin NF and hope dearly it will be protected for generations to come. It is a beautiful area for camping and hiking; please keep it so!!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Dan Smail

Dear Custer Gallatin Forest Supervisor Erickson,

As we must do what we can to ensure the survival of human beings and other species, we need, more than ever, to protect our forests and woodland areas. Forests help combat global warming and shelter many plants and animals that are critical to the maintenance of life.

Dear Custer Gallatin Forest Supervisor Erickson,

Isn't it time that the Government permits a natural resource to be obliterated for short-term profit? If the Gallatin-Custer NF is logged, it may provide jobs for the present but leave nothing for the future. There is also the matter of ecological degradation which will result--erosion, silted trout streams, new understory likely to burn wildly in the future, no new tree growth comparable to what will be cut down for at least fifty years, if not longer in our semi-arid climate. When will treating National Forest Land as if they were slaves whose lives the government completely disregard. Save the G-C National Forest now.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Sarah Krall

Dear Custer Gallatin Forest Supervisor Erickson,

In this day of climate change, when our wildlands and wild life are under so much threat already, it's critical that we save what we can, now, while we can! Please provide protection for the Custer-Gallatin Wild land!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Nathan Hirsch
Boise, ID 83702

Forest Supervisor, Mary Erickson
Custer Gallatin National Forest

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

WE live in Paradise Valley and look at the Gallatins' every day. The threats that we have seen from mining here in the Absaroka...Lucky Minerals and Crevice have shown us that Paradise does not stay that way without protections...and protections from the government that is for sure.

I would encourage any action that would preserve as Wild any portion of the Gallatin Range particularly that which is under review now.

Pete Murray, Old Chico, Paradise Valley, MT

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF.

I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Peter Murray

Dear Custer Gallatin Forest Supervisor Erickson,

The goal of a management plan should be to ensure the protection and viability of the resources being addressed. Many of these resources, such as the Absaroka-Beartooth area which I personally am familiar with and actually spent part of my honeymoon in, are so unique and valuable, they should be considered national treasures. They need all of the protections possible particularly in view of changing population and environmental pressures.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Louis Discepola
Hackensack, NJ 7601

Dear Custer Gallatin Forest Supervisor Erickson,

Wild life and plants deserve our dedication to keeping their communities intact.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). Dear Custer Gallatin Forest Supervisor Erickson,

I hope that you will take bold action to better protect the wild lands and the wildlife found in the Custer Gallatin National Forest. Do not adhere to the Trump administration's policy direction towards, extraction and exploitation. Instead, please preserve these coveted forest valleys, plateaus and mountains for their natural resources, their wildlife habitat and non-motorized recreation, which all all values that will benefit our future generations!

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

We are opposed to designating any of the wilderness study areas as open for mountain bike recreation. The northern end of the Gallatin range is vital for species migration and healthy diversity of wildlife, and increasing human traffic adversely affects wildlife.

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. Dear Custer Gallatin Forest Supervisor Erickson,

Dear Miss Erickson,

I stand with the position of the Sierra Club regarding the Custer-Gallatin Forest Plan Revision #50185 and I urge you to do the same. The Sierra Club's position is the best option for the Gallatin Valley and the people in it because of the considerations for wildlife and habitat protection while still allowing for shared uses. I love the Custer-Gallatin and want the next generation to have the same playground as I have now.

Thank you,
Samuel Payne

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Anna Brewer

Dear Custer Gallatin Forest Supervisor Erickson,

We are in the middle of an environmental crisis. Land is being torn up and polluted and wildlife are losing their homes. It is cruel and irresponsible to continue on this path

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Endangered species such as grizzly bears and gray wolves migrate from Yellowstone National Park into the roadless areas of Custer-Gallatin National Forest. You are deciding how to manage this forest for the coming decades; however, your draft plan fails to adequately protect wildlife habitat. I strongly urge you to formulate a better plan for our national forests and endangered wildlife. Please act on their behalf so they may continue to survive. Thank you.

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

With the Custer Gallatin forest being as important as it is for migration of important wildlife species, this land must be kept accessible for wildlife in order for them to thrive. I believe the new plan is insufficient in doing this due to the lack of proposed roadless areas and wild land protections. I oppose the revision to the Custer Gallatin Forest Plan and I think it should be revised to include the necessary protections to preserve this land for the migration of important species. Thank you for your time.

I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these). The forest plan should recommend a significant portion of the Gallatin Range for wilderness, including the exceptional wildlife habitat in the Porcupine-Buffalo Horn area, South Cottonwood, Hidden Lakes, and West Pine.

In the Absaroka-Beartooths, several drainages adjacent to existing wilderness are also worthy of wilderness recommendation including Line Creek, West Fork/Lake Fork of Rock Creek, Mill Creek, East Rosebud, and Main Fork Rock Creek. In the Madisons, the area south of the Taylor Hilgard Wilderness Unit should be recommended for wilderness designation. Cowboy's Heaven should be recommended for wilderness due to the important wildlife linkage it provides to portions of the Lee Metcalf Wilderness. I support the previous forest plan's recommendation of nearly 23,000 acres of wilderness in the Lionhead. Large portions of the Pryors roadless areas including Big Pryor, the Punchbowl, Lost Water Canyon, and Bear Canyon should be recommended for wilderness. I want recommended wilderness to be managed in the same way as designated Wilderness, excluding mechanized and motorized recreation to preserve the wild character of the landscape.

The management plan should facilitate the return of bison to their historic range and allow them to move freely through their native habitat, with the goal of a year round self-sustaining bison population in the CGNF. I support the designation of the 30 eligible wild and scenic rivers as a key component of protecting riparian ecosystems of the CGNF. I believe that these wilderness and wild and scenic recommendations are necessary because this forest will face tremendous challenges in coming years. The rapidly increasing population of Gallatin county and climate change will significantly impact the CGNF. The revision of this forest plan is our best opportunity to protect this incredible ecosystem. The management of this forest should lean towards wilderness preservation because I fear if we do not act now, we will not get a second chance.

Sincerely,

Bozeman, MT 59771

Dear Custer Gallatin Forest Supervisor Erickson,

Wildlands should be just wildlands strictly for wildlife of all sorts that call it home.

They are linked ecosystems that function best as is without outside disturbance; there is enough other land for human use already; why the desire to always encroach into wilderness. No need to change how it was originally designed...WILDERNESS. Would you like your home invaded? Wildlands are always being reduced more & more until there's none or very little. In some places, wildlife is forced to live in such inhospitable circumstances! STOP that, now. Can't change back to wild once disturbed. Wildplaces & its life have it difficult already with humans, climate change, & more. PROTECT, not destroy! Thank you

Thank you for the opportunity to comment on the draft plan for the Custer Gallatin. While I recognize the hard work that has gone into this draft plan, I believe that the best way forward for the Custer Gallatin National Forest (CGNF) is not contained within a single alternative. I support the Sierra Club's vision for recommended wilderness in the Custer Gallatin.

Specifically, I would like to see two roadless areas in the northern Bridgers around Blacktail and North Cottonwood recommended for wilderness. I would like three roadless areas within the Crazies to be recommended for wilderness (significant areas of polygons 36, 37 and roadless area between these).
